

放下竹叢礁後,小野和弟弟總愛現的憋氣潛水。 想看看竹叢礁上有沒有軟絲的卵。

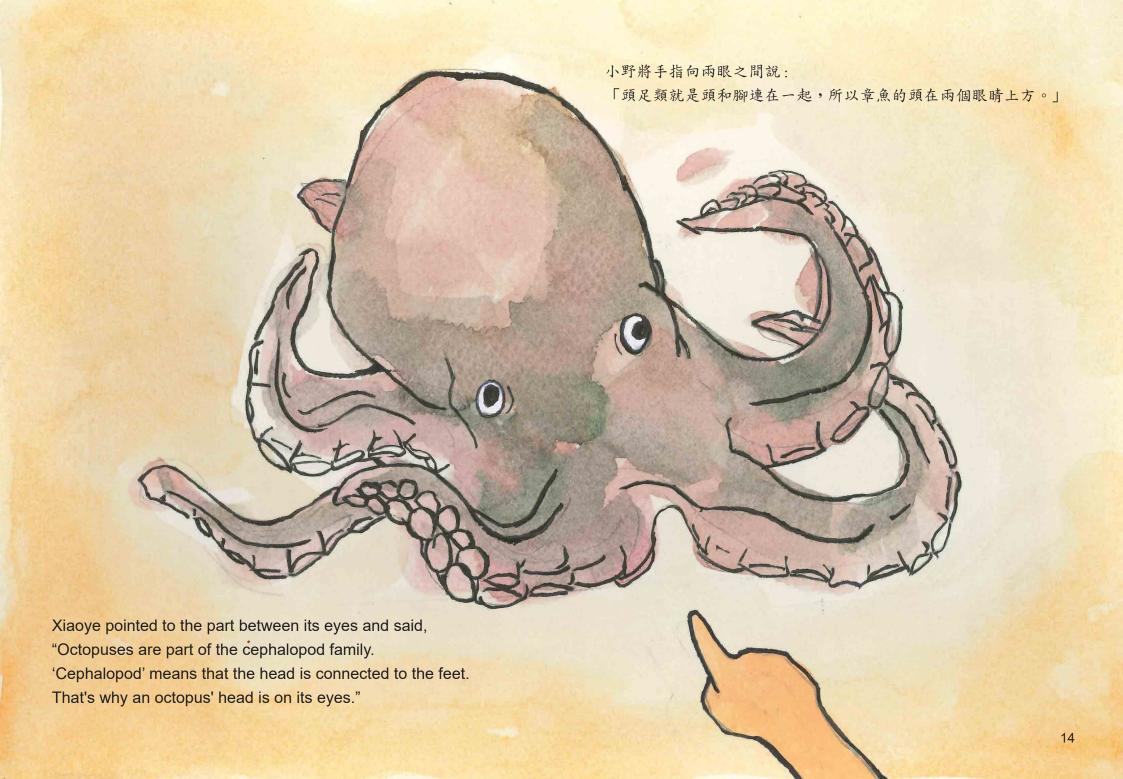

After that, Xiaoye and his brother always liked to show off their diving skills and see if there were eggs attached to the bamboo.

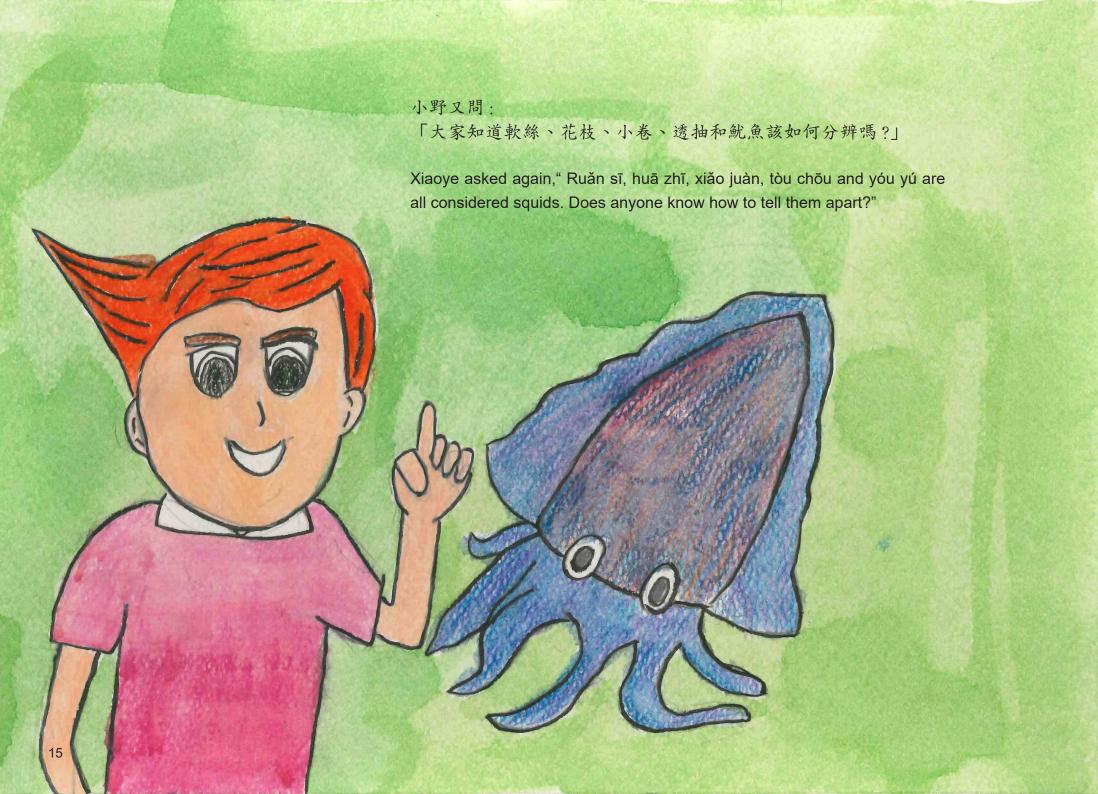

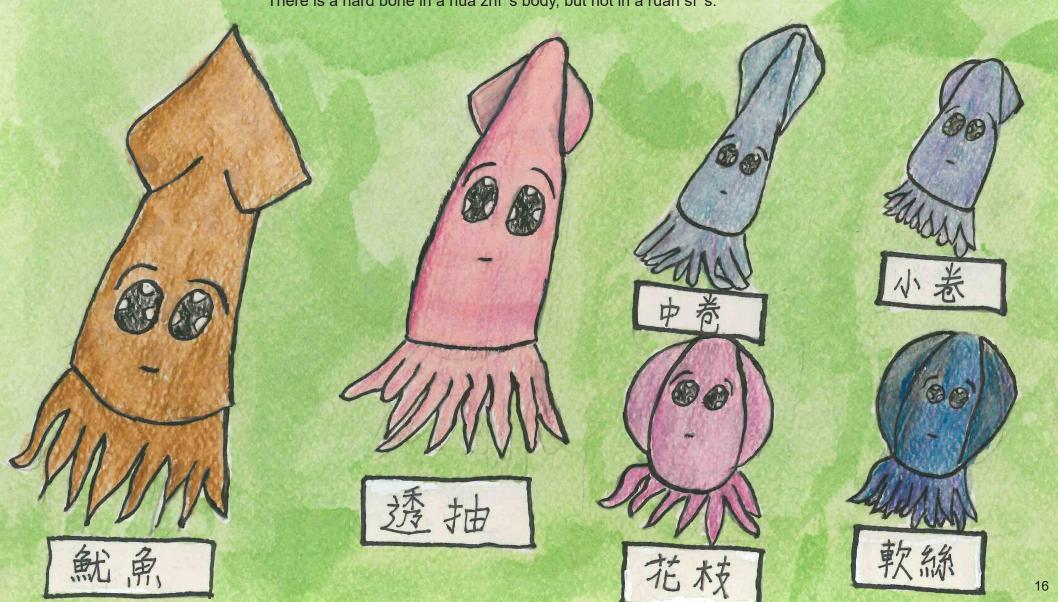

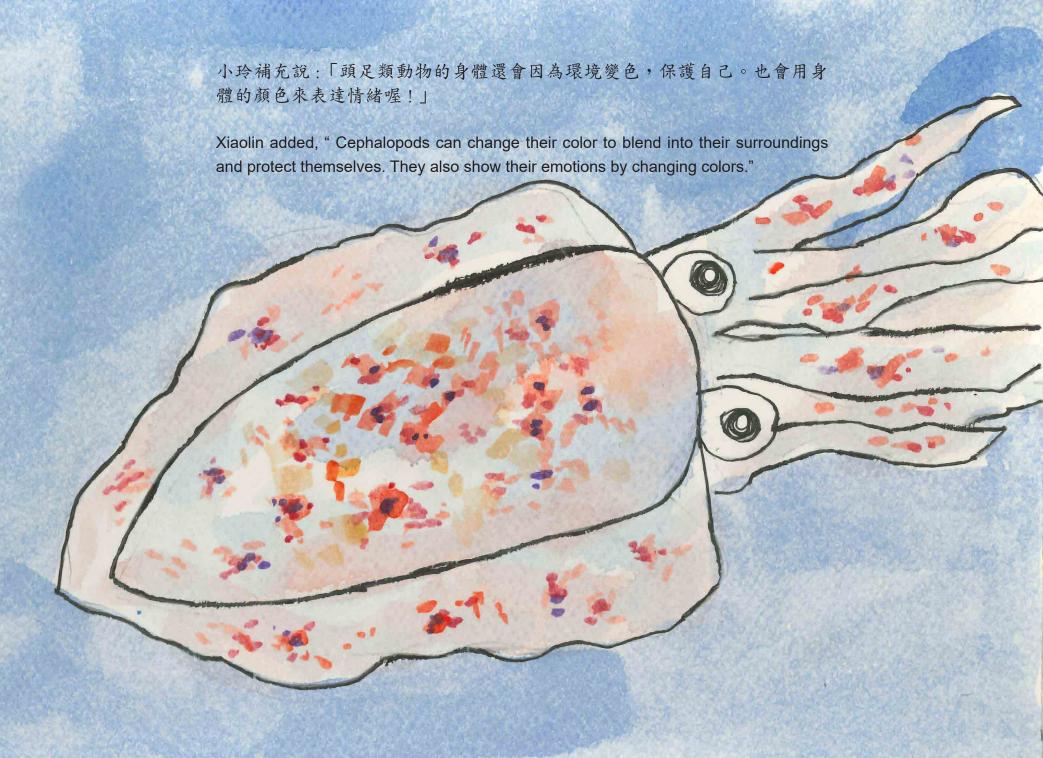

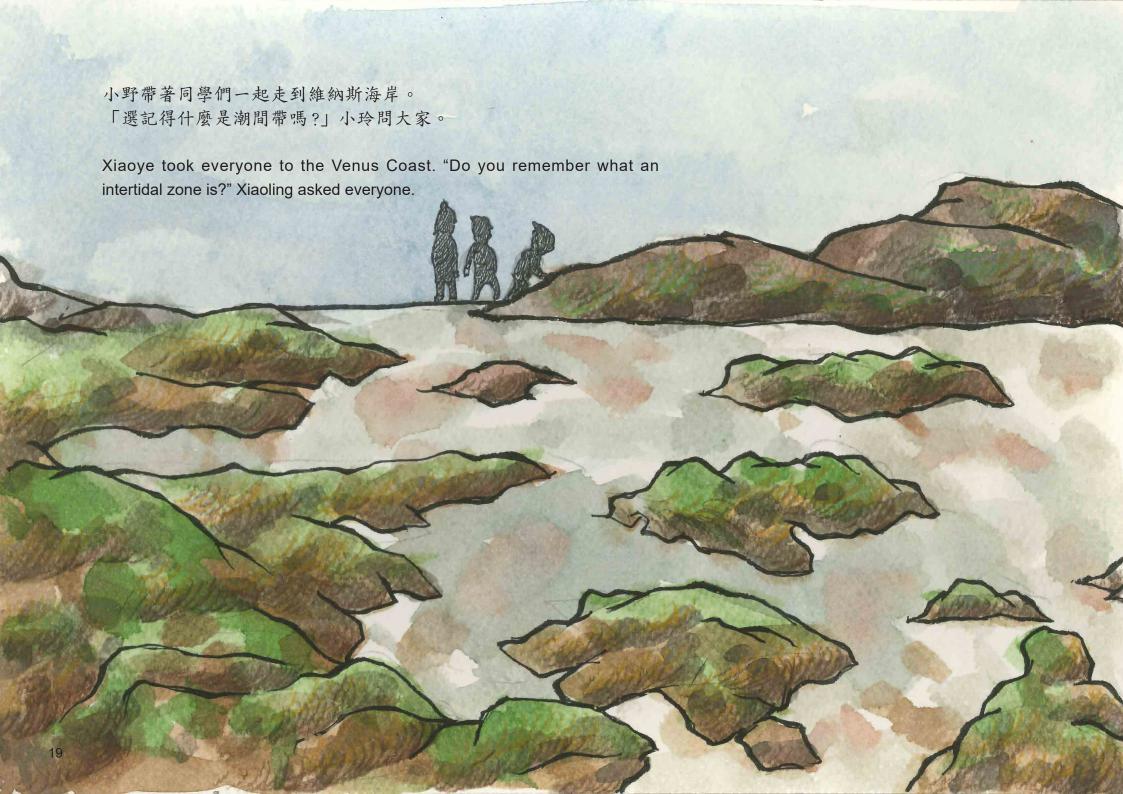

「後方肉鰭三角形的是魷魚,菱形的是小卷和透抽。而花枝和軟絲的肉鰭是一長條連在身體的旁邊,花枝的體內有硬硬的白色骨板, 而軟絲沒有。」

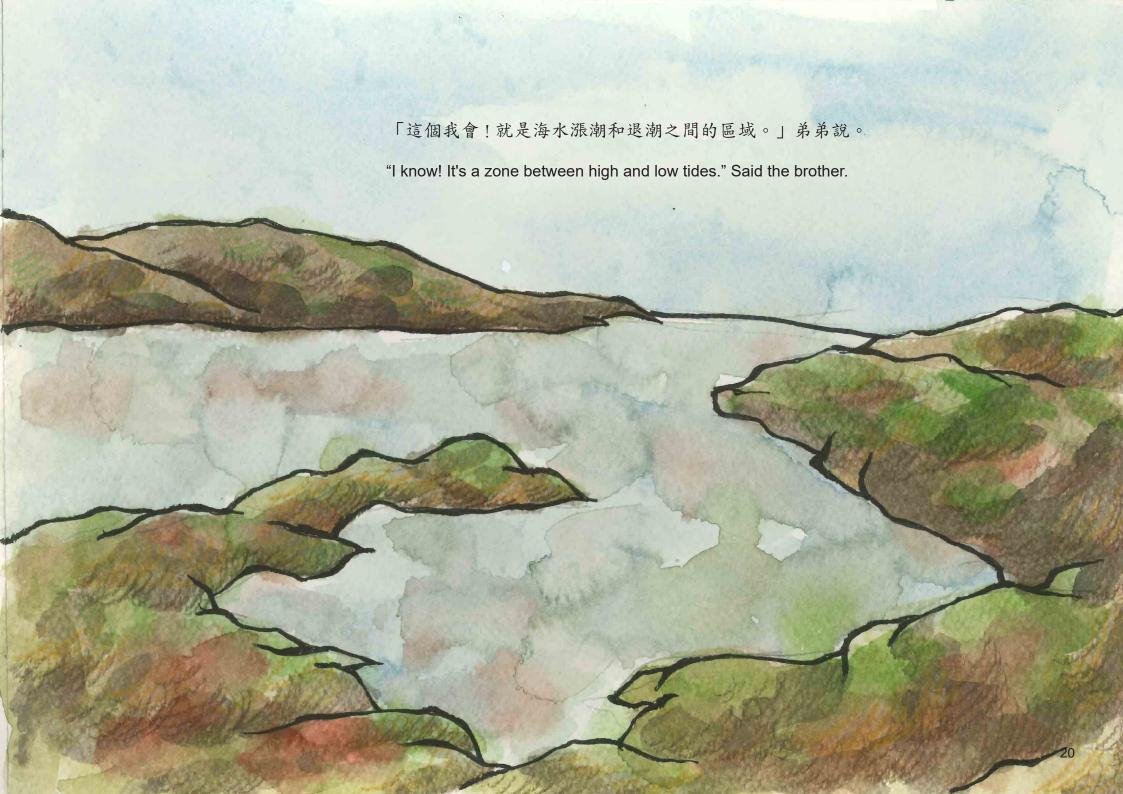

"A yóu yú has a triangle fin, xiǎo juàn and tòu chōu have a diamond ones. The fins of a huā zhī and a ruǎn sī are long shaped and connect to the two sides of the body. There is a hard bone in a huā zhī's body, but not in a ruǎn sī's."

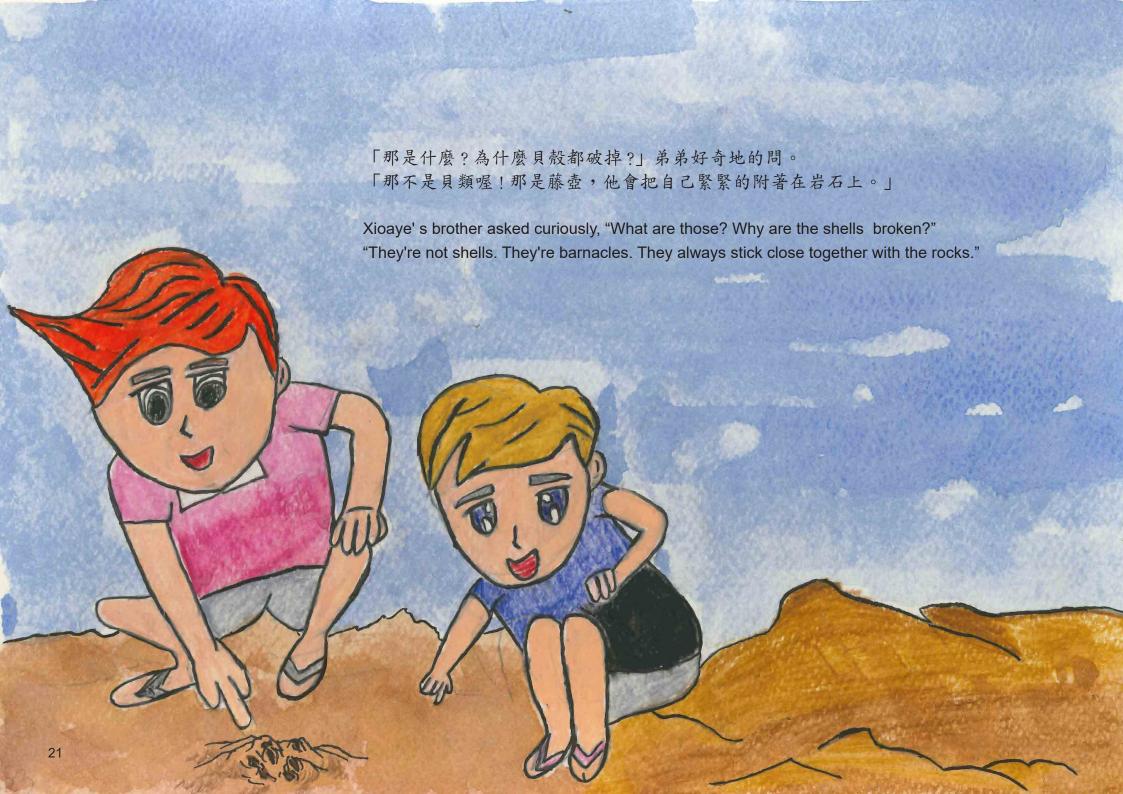

「活的軟絲身上的斑點紋會一閃一閃的發光。我阿公說,新鮮小卷 和透抽的身體斑紋會很清楚,不新鮮就會變得模糊。」 "There are shiny spots and stripes on the body of the living ruan sī. My grandpa told me that we can tell if they are fresh or not by them."

「當漲潮時,他的殼蓋會打開並伸出觸手來濾食浮游生物;而退潮時,牠會關閉殼蓋,防止身體的水分流失。」小野說。

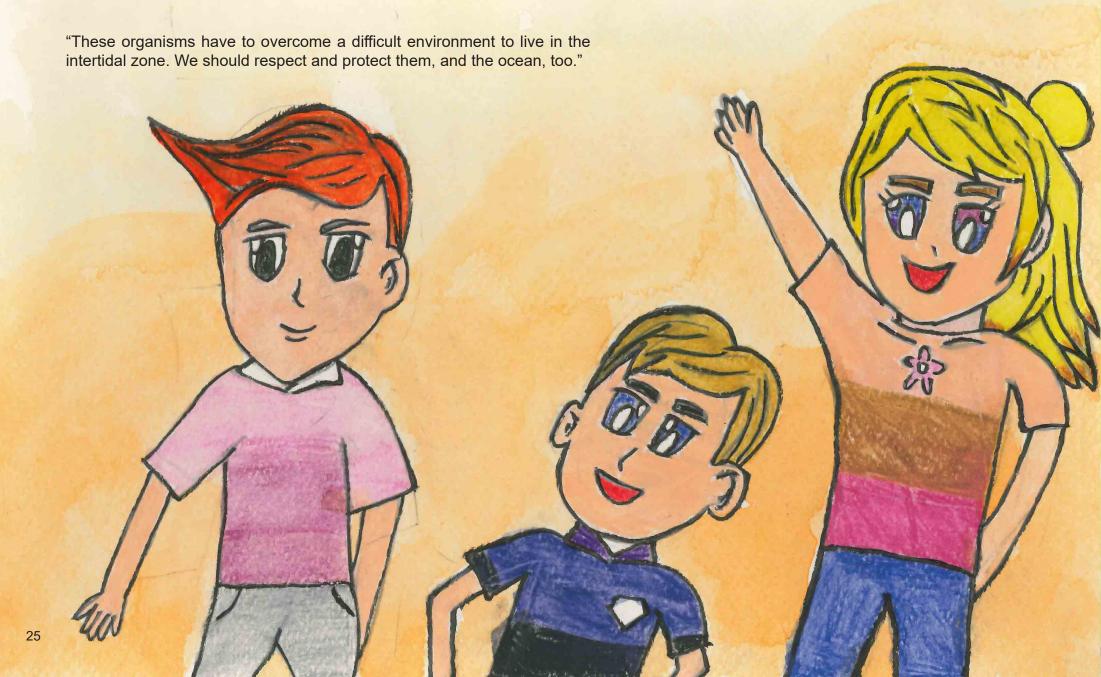

"When the tide is high, they open their shells and stretch their tentacles to catch the plankton. When the tide is low, they close their shells to keep their bodies from losing water."

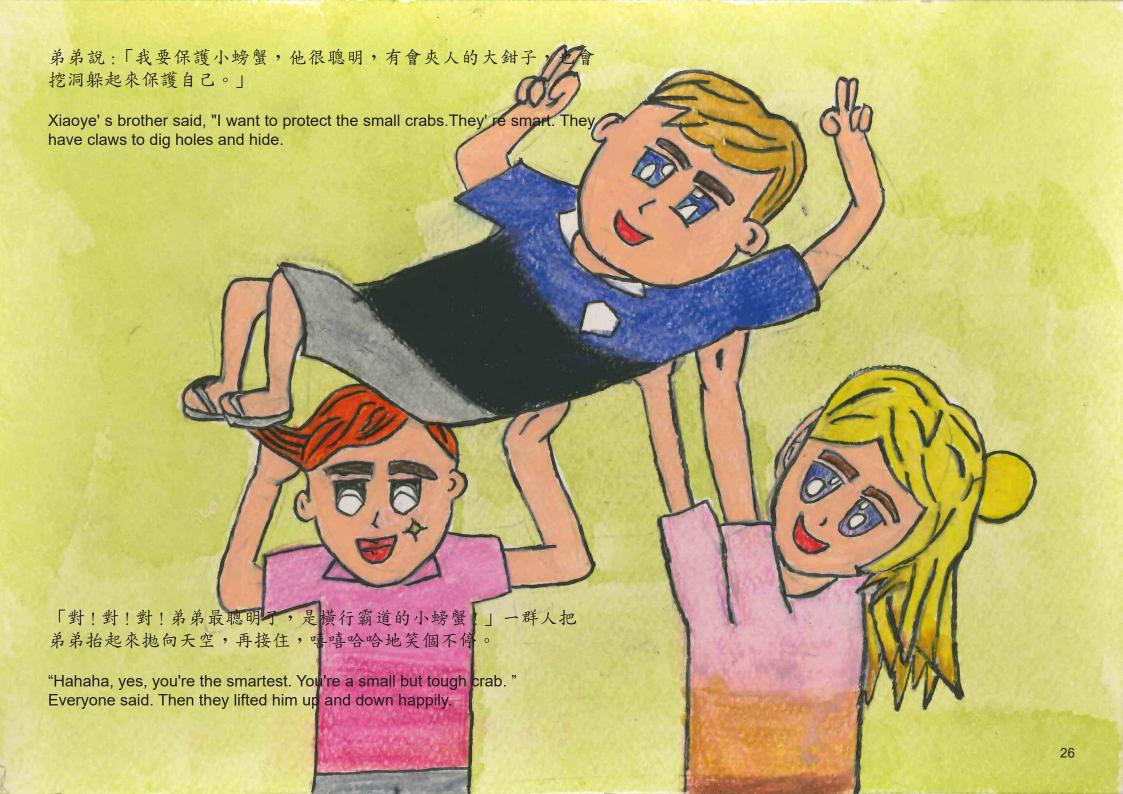

小玲說:「潮間帶的生物為了生存,很努力地克服環境的阻礙,我們要尊重牠們,也守護這一片海洋。」

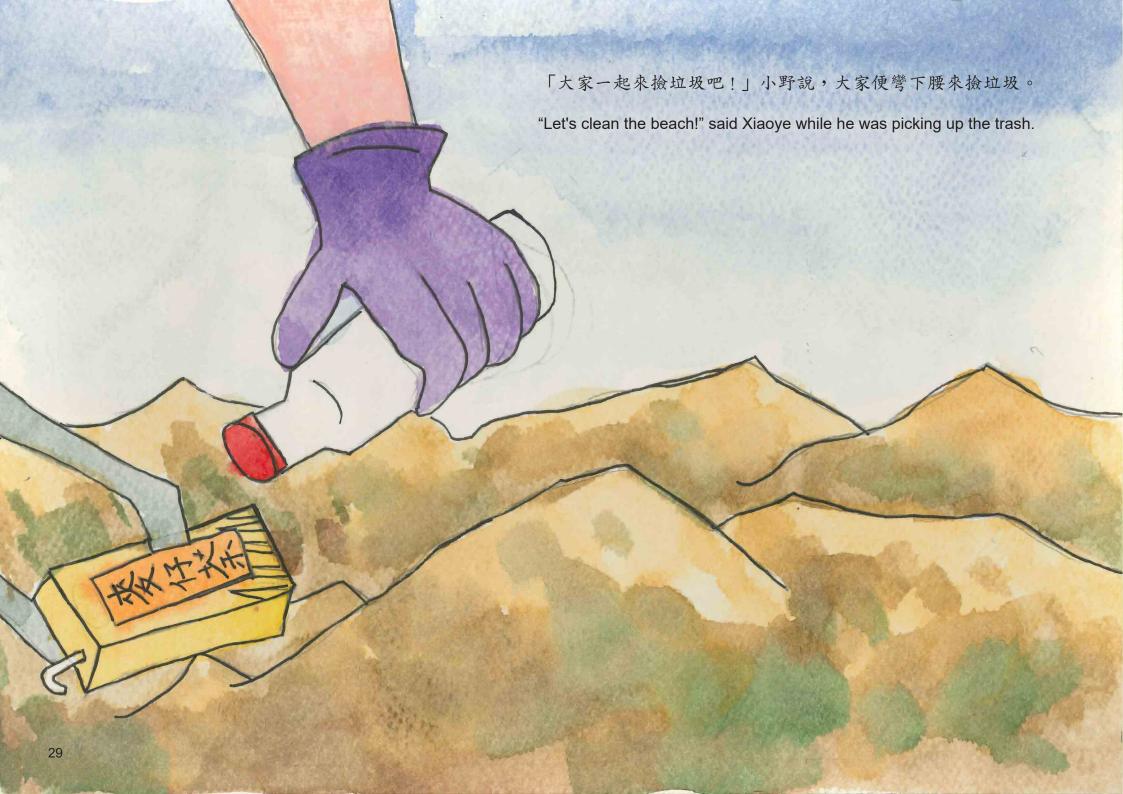

Xiaoye looked at something closely and said, "What's this?"

「這麼漂亮的海岸竟然飄來寶特瓶!」小玲喊著。 小野生氣的說:「真沒公德心,破壞環境生態。」 Xiaoling yelled, "How come there are so many PET bottles scattered on such a beautiful seashore?"
Xiaoye said angrily, "This behavior is not just selfish but also ruining our environment."

「你們看,這是漂流木,我們可以撿回去彩繪創作。」小玲說。 「對啊!浮標、浮球或漂流木都可以再利用,我有個好點子。」小野說。

Xiaolin said, "Look! It's driftwood. Let's take it back and we can color it and make it an art piece." Xiaoye talked to everyone, "We can reuse the buoys, balls and driftwood. I have a good idea!"

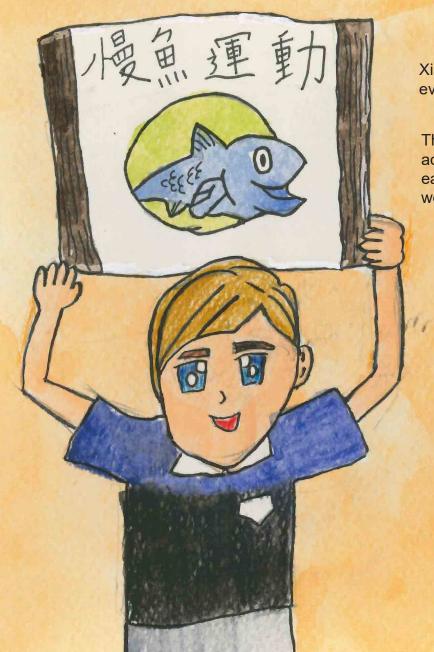

「我們可以利用這些海洋廢棄物創作一些吸引人的作品,再寫上一些愛護海洋的標語,掛在學校的圍牆上,提醒大家要愛護海洋,珍惜海洋資源。」

"We can change the ocean waste into artwork to attract people, write some slogans, and hang it on the school wall to remind everyone that we need to protect and cherish our ocean resources."

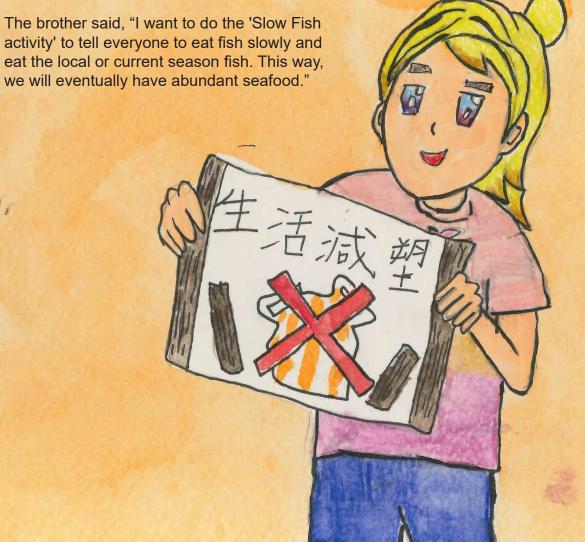

「嗯,我要宣導生活減塑,希望大家在平時的生活裡少用塑膠製品,或者重複使用。」小玲說。

「那我要來個慢魚運動,讓大家慢慢吃魚,吃在地,食當季,讓海洋永續存本,這樣我們才會一直有海鮮可以品嘗。」弟弟說。

Xiaolin said, "Yes. I' Il promote plastic reduction. I hope that everyone can reduce or recycle plastic waste."

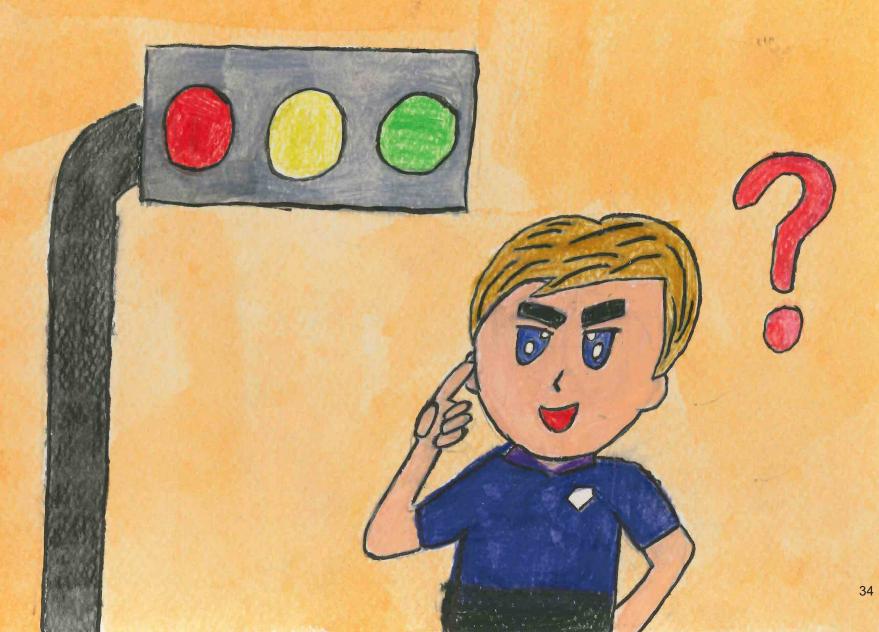

小野說:「那我要還要告訴大家海鮮選擇紅綠燈。」

Xiaoye said, "I will have everyone learn about the seafood traffic light."

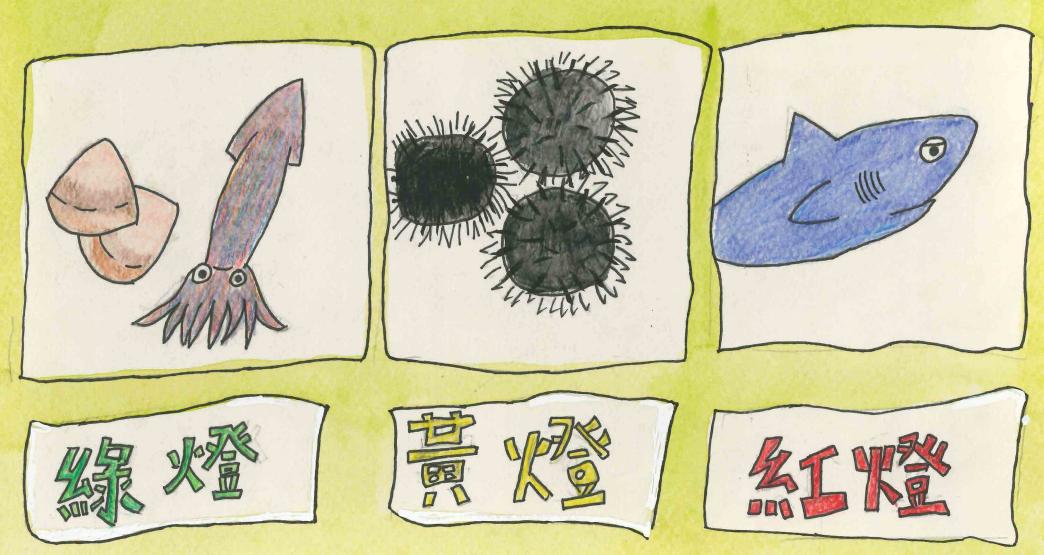

「海鮮也有紅綠燈?」小野弟弟好奇的問。

"There's also a traffic light for seafood?" Asked Xiaoye's brother.

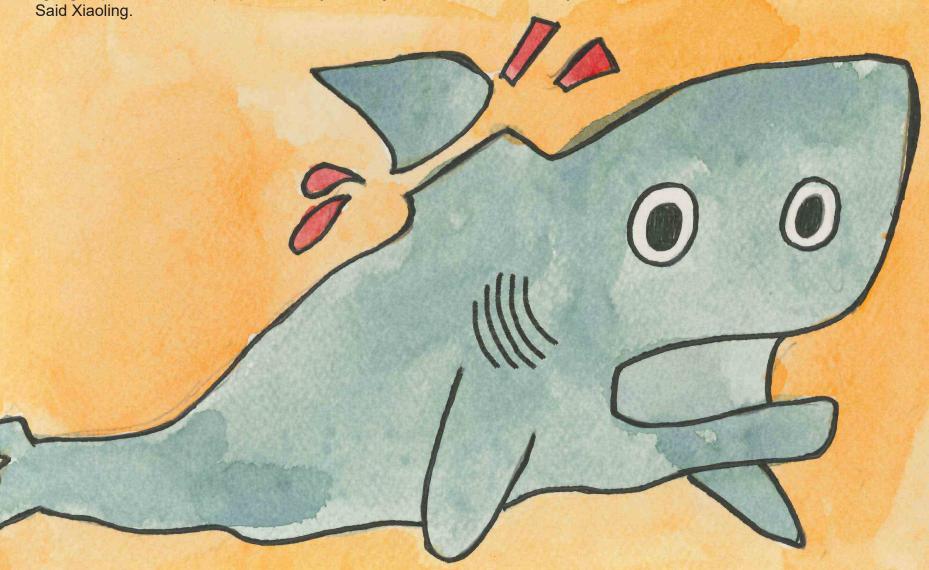

「這個紅綠燈是把魚種分成可以常吃的綠燈組、想清楚再吃的黃燈組和建議勿食的紅燈組。像蛤蜊和小卷都是綠燈組海鮮,可以在 生產季常常食用。小野說。 "We divided seafood into three traffic lights- green, yellow and red light. The green light group means 'eat more often' The yellow light group means 'think before you eat'. The red light group tells people 'better not to eat'. For example, clams and squids are in the green light group, so we can eat them more in the right season." explained Xiaoye.

「以前我很愛吃魚翅,現在我也不吃了,因為是紅燈組海鮮,要捕殺大量的鯊魚,只取牠的魚鰭,很殘忍。」小玲說。

"I loved eating shark fins so much but I don't anymore. Shark fins are in the red light group which means people kill many sharks just for their fins. It is really cruel." Said Xiaoling

「看看這片美麗的海洋,希望遊客可以把自己的垃圾帶走,讓海岸一年四季都有不同的風貌。」大家在心裡期許著。
